Introduction

You have chosen the affilinet module for your Magento store. This module facilitates your daily work by integrating essential functionalities of our affilinet platform into your usual store.

Magento and the affilinet module

The affilinet module enables you to integrate important affiliate marketing features into your Magento store. Affilinet presents performance marketing, an attractive, success-based payment model for users directed to your website, high quality, transparent tracking and reporting as well as a sales network with 500.000 publishers (website operators, promoting your products online). This module offers you new customer potentials to expand your reach. Using this module offers you concretely:

- an easy providing of product data feeds to promote your products via dynamically generated ads
- retargeting of (non-purchasing) store visitors
- tracking of customers, which were directed to your store via affilinet
- publisher statistics display of generated clicks, leads and orders.

Besides the fully integrated process of affiliate marketing functionalities within the module, you can always login to the affilinet advertiser portal (<https://advertiser.affili.net>) for using the additional affilinet options.

Module use requirements

In addition to the Magento shop you need an affilinet account to use the module. If you already have an affilinet account, you can easily provide your affilinet programID (see also <http://advertiser.affili.net/Account/ProgramData.aspx>) as well as your affilinet webservice login details (see also <http://advertiser.affili.net/Account/AccountData.aspx>) in the settings. Now you have access to all functionalities.

New clients can directly apply for an affilinet account via the “registration” tab.

Supported Magento editions

The affilinet module supports the following editions:

- Magento Community Edition versions 1.6, 1.7, 1.8
- Magento Enterprise Edition versions 1.11, 1.12, 1.13, 1.14

If you have further questions about supported Magento versions or problems with the installation, please contact our technical support.

Supported PHP versions

Please note: The affilinet module supports PHP only for the version 5.4.

System requirements

Please make sure, that you fulfill the system requirements, which are necessary for the Magento system.

Installation

Before the installation

1. Make sure, that you fulfill the system requirements, which are necessary for the Magento system
2. Make a backup of your Magento store and your database.
3. Go to Magento Connect and search for the affilinet extension:
<http://www.magentocommerce.com/magento-connect/affilinet-modul.html>
4. Select your edition (CE or EE) and click „Get Extension Key“

Installation

1. Deactivate the Magento Compiler System › Tools › Compilation › Disable
2. Select System › Magento Connect › Magento Connect Manager in the Magento admin session and type in your admin login details.
3. Enter the Extension Key, requested for Magento connect, click the “Install” button and confirm with the “Next” button.
4. The installation starts and you will receive a message after it has been finished successfully. You will now find the affilinet extension in your list of installed extensions.

After the installation

1. Go to System › Cache Management and clear your Magento cache.
2. Logout of the Magento admin area and then login again
3. Reactivate the Magento Compiler, if used before, under: System › Tools › Compilation
4. The Magento cronjob system must be activated to use the product feed generator. Please follow the Magento Feed-Generator documentation for the set up.

The extension is now installed and you can start with the configuration.

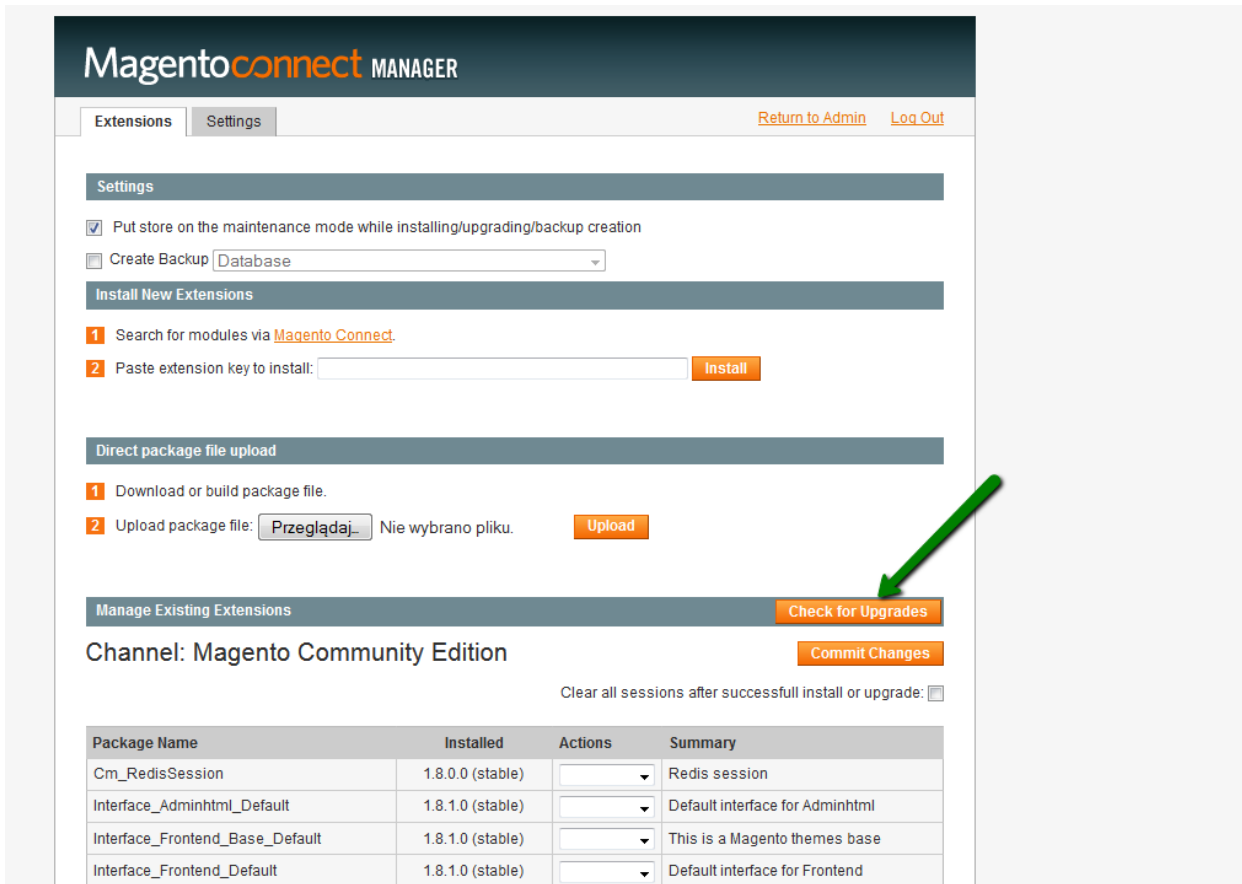

Upgrade

Before the upgrade

Make a backup of your Magento store and your database.

Upgrade

1. Select System › Magento Connect › Magento Connect Manager in the Magento admin session.
2. Check for new upgrades:

Magentoconnect MANAGER

affilinet Introduction

You have successfully installed the affilinet module for your Magento store

This page offers further information about installation, configuration and handling.

Magento and the affilinet module

The affilinet module enables you to integrate the affiliate marketing functionality into your Magento store. Affilinet means performance marketing, an attractive, success-based payment model for users directed to your website, high quality, transparent tracking and reporting as well as a sales network with 600.000 publishers (website operators, who promote your products via internet). This module offers you new customer potentials to expand your reach.

Using this module offers you concretely: an easy providing of product data feeds to promote your products via dynamically generated ads, retargeting of (non-purchasing) store visitors, tracking of customers, which were directed to your store via affilinet and a statistics display of generated clicks, leads and orders of these customers per publisher.

Besides the fully integrated process of affiliate marketing functionalities within the module, you can always login to the affilinet [advertiser portal](#) for using the additional affiliate marketing options.

Module use requirements

In addition to the Magento shop you need an affilinet account to use the module. If you already have one, you can easily provide your affilinet programID as well as your affilinet [webservice login details](#) in the settings. Now you have access to all functionalities. New clients can directly apply for an affilinet account via the "registration" tab.

Supported Magento editions

- Magento Community Edition versions 1.6, 1.7, 1.8
- Magento Enterprise Edition versions 1.11, 1.12, 1.13, 1.14

Registration

If you don't have an affilinet account so far, you can easily apply for an affilinet account at any time under the tab „Registration“.

Affilinet will check your application and will provide all necessary documents on acceptance.

Magento Backend > affilinet > Registration

The screenshot shows the Magento Admin Panel interface. At the top, there's a navigation bar with the Magento logo and 'Admin Panel' text. A search bar labeled 'Global Record Search' is present. The user is logged in as 'admin' on 'Montag, 22. September 2014'. There are links for 'Try Magento Go for Free' and 'Abmelden'. Below the navigation bar, a menu bar includes 'Dashboard', 'Sales', 'Catalog', 'Mobile', 'Customers', 'Promotions', 'affilinet' (highlighted), 'Newsletter', 'CMS', 'Reports', and 'System'. A link 'Hilfe zu dieser Seite' is also visible.

The main content area is titled 'affilinet Registration'. It features two main sections: '1 Company details' and '2 Program details'. The 'Company details' section is expanded, showing 'Contact details' and 'Address' sub-sections.

Contact details

Salutation:*
 

First name:*
 Surname:*

Company:

Address

Address line 1:** Address line 2:

Postcode:* City:*

Country: 

Other information and availability

Email:* Phone:*

Best time to contact me by phone:*

At the bottom right of the form is a red button labeled 'More' with a right-pointing arrow.

Settings

General settings

If you have already an affinet account, you can start immediately. Enter your affinet programID, your webservice login details as well as your company logo in the settings and choose your currency. For multi-store installations the configuration of the extension will be passed on, but can be adjusted individually for individual stores.

Use of Magento Multistores

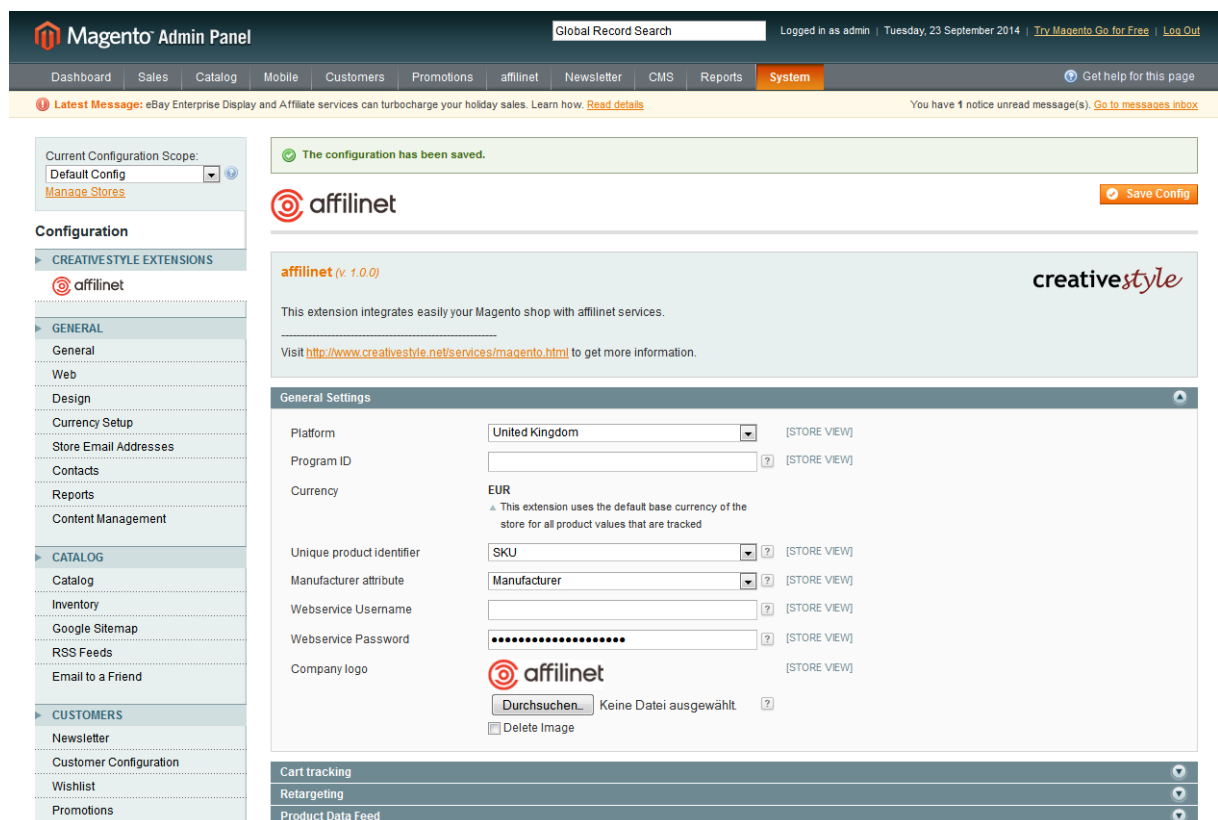

You have the option to use Magento Multistore installations for the extension. As usual you can define the settings for different scopes. Specific website settings will be applied to the website store views. Magento Multistore installations provide very flexible configuration options, since all extension settings can be defined in the store view.

Logo upload

The maximum required logo size is 120 x 40 px. Bigger images will automatically be scaled to this size. Therefore we recommend only uploading logos with this size.

Please note: The currency of the German affinet platform is Euro. If you define a foreign currency in the settings, the amounts will be converted in Euro (based on to the daily exchange rate) and accordingly displayed in the affinet portal. Therefor the "currency conversion" must be activated by affinet. Please contact the affinet Support at support@affili.net.

Magento Backend > affinet > Settings

The screenshot shows the Magento Admin Panel interface. At the top, there's a navigation bar with tabs for Dashboard, Sales, Catalog, Mobile, Customers, Promotions, affinet, Newsletter, CMS, Reports, and System (highlighted). A search bar and user information (Logged in as admin, Tuesday, 23 September 2014) are also present. Below the navigation bar, a message bar indicates a latest message about eBay Enterprise Display and Affiliate services.

The main content area is divided into two columns. The left column contains a sidebar with a 'Configuration' section for 'CREATIVESTYLE EXTENSIONS' and 'affinet'. The right column shows the 'General Settings' for the 'affinet' extension (v. 1.0.0). The settings include:

- Platform:** United Kingdom (STORE VIEW)
- Program ID:** (STORE VIEW)
- Currency:** EUR (STORE VIEW). A note states: "This extension uses the default base currency of the store for all product values that are tracked."
- Unique product identifier:** SKU (STORE VIEW)
- Manufacturer attribute:** Manufacturer (STORE VIEW)
- Webservice Username:** (STORE VIEW)
- Webservice Password:** (STORE VIEW)
- Company logo:** affinet (STORE VIEW). Below the logo, there's a 'Durchsuchen...' button and a 'Delete Image' checkbox.

At the bottom of the settings area, there are three expandable sections: 'Cart tracking', 'Retargeting', and 'Product Data Feed'.

Basket Tracking

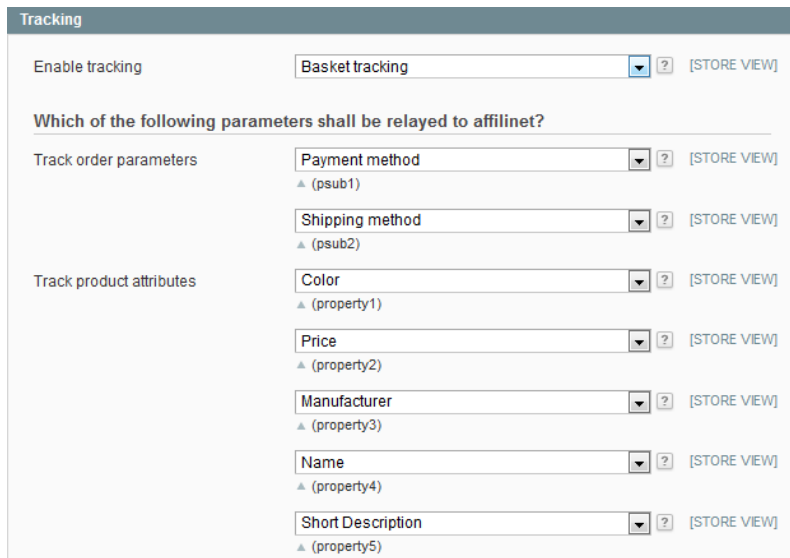

The affilinet basket tracking system allows you to submit shopping basket information on item level to affilinet. That information enables you to perform detailed statistical analyses and allows your publishers to optimize their marketing activities even further.

In the affilinet basket tracking system, we distinguish between baskets and basket items. Baskets can be confirmed and cancelled like regular transactions, but before you do this, you can update the contained basket items: you can update the quantity of single items or remove single items from the basket (e.g. if the article was returned by the customer); the publisher's commission is automatically updated.

In order to evaluate the baskets even better, you can activate two additional tracking parameters (psub 1,2) in the cart tracking settings, which are only visible for the advertiser (you). You can specify whether you want to submit Magento default values as payment method or shipping method to be displayed in your statistics.

As product attributes you can submit additional parameters for the basket items as e. g. size, color, material etc.. These attributes will also be displayed in the publisher's statistics for optimization purposes. Please transfer only data, which should be visible for publishers as well.

Magento Backend > affilinet > Settings > Cart tracking

Tracking

Enable tracking: **Basket tracking** [?] [STORE VIEW]

Which of the following parameters shall be relayed to affilinet?

Track order parameters:

- Payment method** [?] [STORE VIEW] (psub1)
- Shipping method** [?] [STORE VIEW] (psub2)

Track product attributes:

- Color** [?] [STORE VIEW] (property1)
- Price** [?] [STORE VIEW] (property2)
- Manufacturer** [?] [STORE VIEW] (property3)
- Name** [?] [STORE VIEW] (property4)
- Short Description** [?] [STORE VIEW] (property5)

Standard Tracking

Tracking is the basis of affiliate marketing, enabling you to register your orders which have been generated by affilinet publishers.

Furthermore it enables the advertiser to pay a publisher commission also, if the customer buys not before the second or another shop visit within a certain time.

Magento Backend > affilinet > Settings > Tracking > Standard Tracking

Tracking	
Enable tracking	Standard tracking [?] [STORE VIEW]
Rate for publisher commission	Lead 2 - Newsletter [?] [STORE VIEW]
Which of the following parameters shall be relayed to affilinet?	
Track order parameters	Payment method [?] [STORE VIEW] ▲ (psub1)
	Shipping method [?] [STORE VIEW] ▲ (psub2)

Please note: The rates are submitted through affilinet webservice. If you didn't provide your affilinet webservice login data in the module area, no data will be delivered.

Retargeting

This technology enables you to re-address specifically interested customers. Potential customers, who left your online shop without a purchase, can be returned to your store via personalized ads (e. g. dynamic product banners). These ads will be displayed through affilinet retargeting publishers within their media reach.

Magento Backend > affilinet > Settings > Retargeting

Retargeting	
Enable retargeting	Yes [?] [STORE VIEW]
Product parameters	<input type="checkbox"/> Original price of a product, if reduced [?] [STORE VIEW] <input checked="" type="checkbox"/> Product rating [?] <input checked="" type="checkbox"/> Label for reduced prices [?] <input checked="" type="checkbox"/> Label for main products or accessory [?]
Category parameters	<input checked="" type="checkbox"/> URL of category image [?] [STORE VIEW]
Cart parameters	<input type="checkbox"/> Original price of a product, if reduced [?] [STORE VIEW] <input type="checkbox"/> Quantity of products added to cart [?]
Checkout parameters	<input type="checkbox"/> Individual prices of ordered products [?] [STORE VIEW] <input type="checkbox"/> Quantities of ordered products [?]

In the settings area you find the Retargeting configuration, the possibility to activate retargeting as well as to configure optional parameters.

Product parameters

- Original price of a product, if reduced
- Product rating
- Label for reduced prices
- Label for main products or accessory

Category parameters

- URL of category image

Cart parameters

- Original price of a product, if reduced

- Quantity of products added to cart

Checkout parameters

- Individual prices of ordered products
- Quantities of ordered products

Product datafeed

For many shop products, feeds must be generated within several steps.

Here you can define the number of products, which should be processed per step.

Magento Backend > affilinet > settings > Product Datafeed

Product Data Feed	
Pages	<input type="text" value="25"/> ? [STORE VIEW]
Collection size	<input type="text" value="1000"/> ? [STORE VIEW]

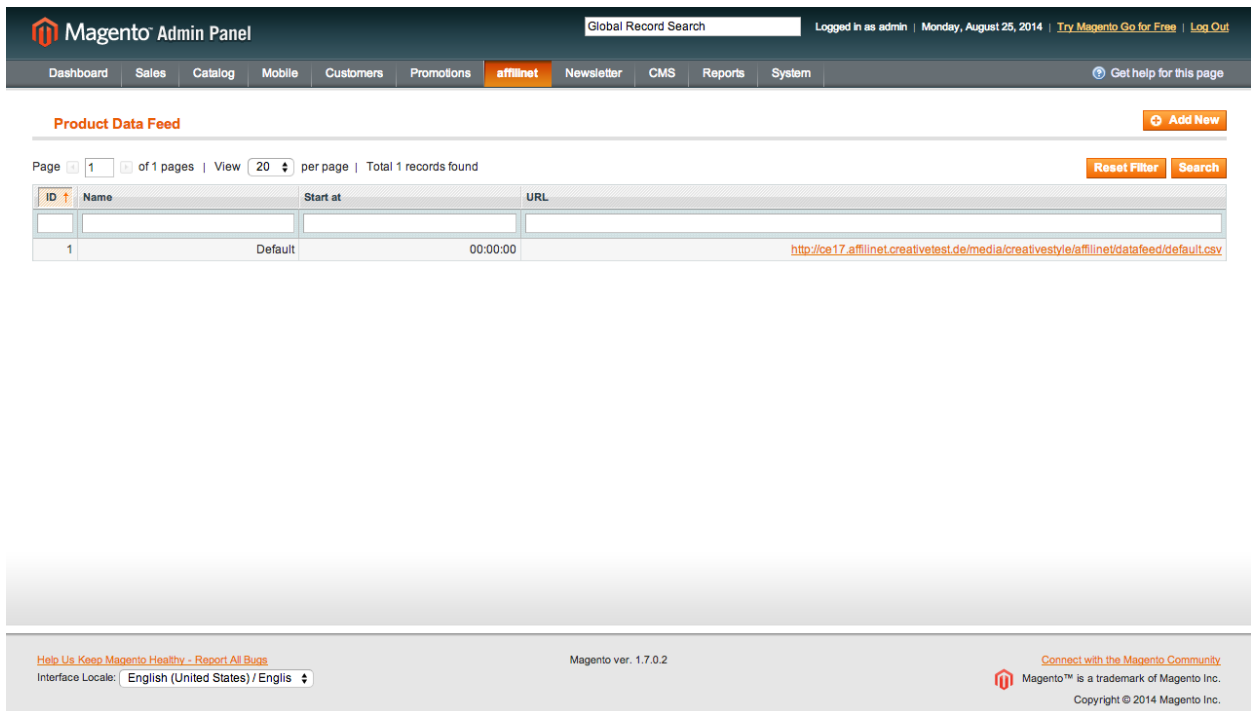

Feed-Generator

The feed generator creates an affilinet matching product feed, based on your Magento product database. You can check this feed in a few steps and submit it to affilinet. On the basis of this product datafeed publishers can build dynamic product ads and deliver them to specific target groups. So customers with a special product desire will come to your store.

- **Step 1** – configuration: Besides the affilinet standard feed you are able to create publisher individual product datafeeds (e. g. for Valentine's Day, Easter or Christmas promotions).
- **Step 2** – preview/export: You can view the data of your feed, created in the first step, with a preview and generate a csv export.
- **Step 3** – Cronjob settings: Here you can specify when the cronjob should start to create the configured product feed and place it on your server as csv file.
- **Step 4** – Finish: Feed name, feed logo, start time of the cronjob and the feed link will be displayed for checking. As soon as your data will be checked you can click the button “submit the feed to affilinet” and your data will be submitted.

The affilinet product data team will now check your feed and enable feed submission deferred to the defined setting terms. So your product datafeed is always up to date.

Magento Backend > affilinet > Product Data Feed

The screenshot shows the Magento Admin Panel interface. At the top, there's a navigation bar with tabs for Dashboard, Sales, Catalog, Mobile, Customers, Promotions, **affilinet**, Newsletter, CMS, Reports, and System. The **affilinet** tab is active. Below the navigation bar, the page title is "Product Data Feed". There's a table with one row showing a feed configuration. The table has columns for ID, Name, Start at, and URL. The first row shows ID 1, Name Default, Start at 00:00:00, and URL <http://ce17.affilinet.creativetest.de/media/creativestyle/affilinet/datafeed/default.csv>. There are buttons for "Add New", "Reset Filter", and "Search". At the bottom, there's a footer with "Help Us Keep Magento Healthy - Report All Bugs", "Interface Locale: English (United States) / English", "Magento ver. 1.7.0.2", and "Connect with the Magento Community".

The feed generator provides various options for item feed configuration.

General Settings:

Name, logo and CSV parameter.

There are additional feed filter options as “Filter active articles”, “Filter active stock” and “Only one product variation”.

Orders

This module area enables you to view all orders, generated by customers, who were directed to your website by affilinet publishers. You can search for periods, publishers, channels as well as individual order IDs and their transaction status and confirm or cancel order commissions.

If the order commissions will not be edited (confirmed/canceled) within the contractually defined time period, orders will be confirmed automatically. Orders with CPC (cost-per-click) based commission for publishers are not shown by default, because the commission must be paid for the click on a banner and not for an occurred purchase (order).
